Girls Who Code.

To whom it may concern,

I am a junior at Western Washington University studying computer science. I have heard about internship positions at Girls Who Code and was very excited to apply. I am a member of the Association for Women in Computer Science and Association for Computing Machinery. Through those programs and on my own, I have grown to enjoy teaching others and helping out others.

Over the past year, I have developed a great interest and passion for coding. My areas of interest are still unbound by any one specific area. I have explored several areas, such as web development and mobile development. Girls Who Code offers an opportunity to develop my skills in coding and teaching in a structured environment. Girls Who Code offers positions in the area of teaching and web development, both of which I have enjoyed.

With expanding on my skills, I also hope to help people who have not had my positive experience find their own way in computer science. I have found enthusiasm through working on personal projects and with others and would like to move to a larger scale. Girls Who Code offers this chance and more and for me to grow and expand on my skill sets and promote a science I love.

Sincerely yours,

Rainier Harvey
